DETAILED ACTION

1. Claims 1-4, 6, 9-17, 19, 22-30, 32, 35-39, and 41-43 are pending in the communication filed 7/09/08 entered as Appeal Brief.

An Appeal Conference was held on 8/07/08 and the decision was to allow the application. Therefore the Finality of the last Office Action is hereby withdrawn.

Claims 1-4, 6, 9-17, 19 22-30, 32, 35-39, and 41-43 are allowed.

The following is an examiner's statement of reasons for allowance: The closest prior art is Bierenbaum (US 6,970,844). Bierenbaum disclosed a method, a computer readable medium and a system, a Financial Service Organization (FSO) business in a computer software program for storing a model of the FSO business in a database and a process workflow that identifies a sequence of tasks to be performed by the FSO production system to process the FSO transaction but failed to disclose configuring a smart trigger table having a plurality of created smart triggers with the smart trigger table comprising for each of the smart triggers, a task identifier and a data identifier associated with the smart trigger, a scheduled date for processing the smart trigger, storing the configured smart trigger table in a first memory, reading sequentially at least two of the smart triggers from the first memory and for each of the smart triggers read from the first memory, and comparing the scheduled date for processing the smart trigger to the current date. "Best Seeks More Uniform Data On Insurer CAT Models (AM Best and Paragon Reinsurance Risk Management Services jointly developing a database of catastrophe exposures for insurers in the US)" disclosed a computer

modeling company for creating a nationwide database of insurers catastrophe loss exposures and building the aggregate, geographical exposure database on a nationwide basis but failed to disclose configuring a smart trigger table having a plurality of created smart triggers with the smart trigger table comprising for each of the smart triggers, a task identifier and a data identifier associated with the smart trigger, a scheduled date for processing the smart trigger, storing the configured smart trigger table in a first memory, reading sequentially at least two of the smart triggers from the first memory and for each of the smart triggers read from the first memory, and comparing the scheduled date for processing the smart trigger to the current date. The American Banker entitled "Technology Terms" disclosed a database as a collection of records stored electronically and a relational database management system as a software system that integrates more than one application program so that interfaces are not necessary and each is accessible instantly but failed to disclose configuring a smart trigger table having a plurality of created smart triggers with the smart trigger table comprising for each of the smart triggers, a task identifier and a data identifier associated with the smart trigger, a scheduled date for processing the smart trigger, storing the configured smart trigger table in a first memory, reading sequentially at least two of the smart triggers from the first memory and for each of the smart triggers read from the first memory, and comparing the scheduled date for processing the smart trigger to the current date. Dievendortf et al (EPO O280773) disclosed a transaction-oriented data processing system, a unit of work representing a transaction form beginning to end and its actions, and a table for an element number used to identify the

table entries, but failed to disclose configuring a smart trigger table having a plurality of created smart triggers with the smart trigger table comprising for each of the smart triggers, a task identifier and a data identifier associated with the smart trigger, a scheduled date for processing the smart trigger, storing the configured smart trigger table in a first memory, reading sequentially at least two of the smart triggers from the first memory and for each of the smart triggers read from the first memory, and comparing the scheduled date for processing the smart trigger to the current date. For these reasons claims 1, 14, and 27 are deemed to be allowable over the prior art of record, and claims 2-4, 6, 9-13, 15-17, 19, 22-25, 28-30, 32, 35-39, and 41-43 are allowed by dependency.

Other Prior Art of Record

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Bennett et al (US 5,615,367) disclosed a Relational Database Management System (RDBMS) with the user specifying two tables to link (e.g., with a pointing device) then the system in response determines a link (relationship) between the two tables and the system automatically attempts to create a link using a unique key (i.e., primary key, candidate key, or other unique index) of the master table. If a foreign key relationship exists between the two tables the system will select the foreign key to display to a user as a suggested link.

Antoshenkov (US 5,495,608) disclosed database access during execution based on the actual number of retrieved keys used for record retrieval.

Morgan et al (US 6,073,140) disclosed the creation, enhancement and update of data on a customer database, a direct table join, and the linkage of the customer database and central database to create a multi-dimensional database.

Moy (US 5,230,048) disclosed a multitask multiuser system for the transfer of data from a remote database to individual subscribers.

Barton, III et al (US 6,026,381) disclosed generated categories with unique ID combinations of account, product information in a position database and a table of code definitions.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
